Macroparasite
From Wikipedia, the free encyclopedia

A different distinction between micro- and macroparasites was made by historian William Hardy McNeill in his 1976 book *Plagues and Peoples*. Macroparasites are defined by McNeill to be infections used to attack and exploit susceptible neighbouring peoples in a form of epidemiological warfare. The parasitological definition of macroparasite is based on parasite life cycles rather than the human politics of biological warfare.

Beyond parasitology

A different distinction between micro- and macroparasites was made by historian William Hardy McNeill in his 1976 book *Plagues and Peoples*. Macroparasites are defined by McNeill to be infections used to attack and exploit susceptible neighbouring peoples in a form of epidemiological warfare. The parasitological definition of macroparasite is based on parasite life cycles rather than the human politics of biological warfare.
